# TRANSPORT DOLLY for L-ACOUSTICS A15

*makes live easier!*

## THE STORY BEHIND

In 2019 L-Acoustics™ introduced the A15 wide and focus enclosures. Their fixed angle makes transportation difficult, especially when you want to fly an array or when you have a combination of wide/focus enclosures. We designed a well thought out transport dolly with several unique features that will make your live easier!

## FEATURES

80x80cm trucks size  
Enclosures can be stacked in left or right configuration  
Lightweight (25kg) and made of stainless steel/aluminium  
Heavy duty 125mm wheels  
RAL9005 matted coated

dolly is CAD-based, high quality parts are used and the finish does match with the KS-21 dolly

with the A15-BUMP on top rigging is quick and easy (on level and no protruding parts)

dolly can also be used as a groundstackframe with adjustable angle and even K2-JACK is compatible for maximum stability

## CONFIGURATIONS

With the adjustable angle (2.5-30 degrees) and the optional angle-extender (2.5-50 degrees) a lot of configurations are possible while the top remains leveled:

- 1x focus
- 2x focus
- 3x focus
- 2x focus + 1x wide
- 1x wide
